| 1. | Rear Qtr Splitter –Driver | 1 |
| 2. | Rear Qtr Splitter –Pass. | 1 |
| 3. | Hardware Pack | 1 |
| 4. | Insert Card | 1 |

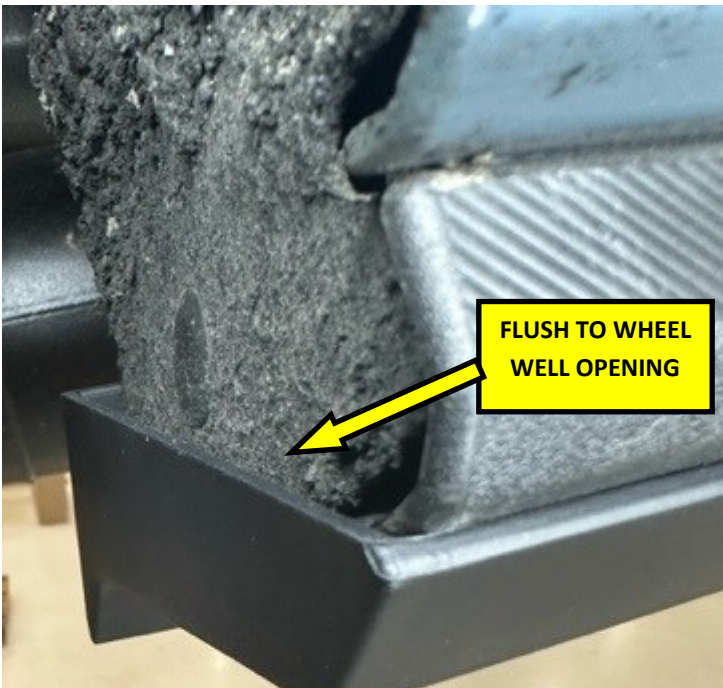

1. Remove the two push pins retaining the rear bumper cover to the lower valence using a trim removal tool or a flat blade screwdriver. These are located near the muffler canisters under the car. See photos.

2. Position the lip (see detail) of the new quarter splitter over the ledge of the rear bumper cover, as shown in the view.

3. Slide the splitter as far rearward as possible so that the lip overhangs the bumper.

4. Ensure that the flat of the quarter splitter is tight to the rear of the lower wheel well opening.

5. Install two push pins as shown. Ensure these go through the quarter splitter as well as the lower bumper cover.

6. Using the quarter splitter as a guide, drill a ¼" (6mm) hole for the final fastener location. Clean up loose plastic bits and be sure hole is clear of debris before proceeding.

7. Install final push pin through the quarter splitter and rear bumper cover in the hole that was just created.

8. Be sure all push pins are flush. Repeat steps on opposite side of vehicle to complete installation.
