1. Locate the holes on the bottom of the seat and using a #2 Philips screwdriver punch out the holes.

2. Check positioning of the lower seat guides. Make sure smooth side is up and spring is located at the back of the seat bottom.

4. Attach seat guide with bolt and lock washer inserted through seat track and through the spacer. (Make sure the spacer is between the track and the seat!) Tighten bolt with a #6 Allen head bit or wrench. (Repeat for opposite side.)
5. Lifting on the spring side of the gold lever, slide track back to reveal remaining bolt hole for each seat guide.

6. Tighten bolt with a #6 Allen head bit or wrench. (Repeat for opposite side.)
7. Install the lower seat adjustment handle with the bend facing forward in relation to the seat cushion.

8. Place on two studs on one side, then squeeze together to install on the other side.
9. Place the seat bracket on the seat making sure the seatbelt mounting stud is opposite of the tilt lever. (Fig 5.1)

10. Insert rear mount bolts through the second bolt hole from the back. Place washer and finger-tighten nut.
11. Release seat track bar. Slide forward to install the front mounting hardware.

12. Tighten all four base bolts using 1/2 inch wrench and socket.

Seats are ready to bolt in!
